

AeraSeal™ Breathable Sealing Films for Cell and Tissue Culture

A 114 µm hydrophobic porous film with medical-grade adhesive for tissue culture plates, bio-blocks, and 96-well plates where gas exchange is necessary for cell or bacterial growth. AeraSeal films minimize evaporation, cross-contamination, and spillage. They allow uniform air and CO₂ exchange for all wells, unlike plate lids which favor exchange for wells near plate edges. Dimensions 82.6 by 142.9 mm for standard-size tissue culture plates. Non-perforated end tabs will easily tear off over the end of the plate if removal is desired. Sterile product is packaged in 100 µm tamper-evident bags of 25.

- non-cytotoxic, highly gas permeable
- easily pierceable with pipette tips or pipettes for sample recovery
- recommended for temperatures from -20 °C to +80 °C

| Catalog No. | Description |
|-------------|---|
| B-100 | AeraSeal Films, Pkg of 100, Non-Sterile |
| BS-25 | AeraSeal Films, Pkg of 50 in two zip bags of 25, Sterile |
